

Care & Maintenance

Its hard, nonporous surface makes CaesarStone simple to clean. In most cases, soap and water or a mild detergent is all that is required to maintain its luster. If necessary, **a non-abrasive** cleanser such as [Soft Scrub Liquid Gel with Bleach](#) or [Comet Soft Cleanser Cream With Bleach](#) can be used along with a non-scratch or delicate scrub pad such as blue Scotch-Brite sponge. Adhered materials like food, gum, nail polish, or dried paint can be scraped away with a plastic putty knife; any marks left by the blade can be removed with Soft Scrub Liquid Gel and a blue Scotch-Brite pad. Thoroughly rinse the surface with clean water to remove residue.

While CaesarStone does not require sealants or waxes to maintain its luster, occasional polishing with Soft Scrub Bleach Gel or Comet Gel will keep the quartz surfacing looking its best.

Please understand that HONED finishes will require more daily maintenance than our polished finishes. Since there is more exposed surface area with honed finishes, metal marks, finger prints and other signs of daily living will show on honed material. Most of these marks can be easily removed with little effort and **non-abrasive** cleaning products such as Soft Scrub Liquid Gel. For tough stains, work the area with a blue Scotch Brite pad.

CaesarStone prides itself in providing our customers a virtually care-free surface, but as with any product, excessive abuse can harm its finish. With a small amount of care, your CaesarStone surface will look as great as the day you bought it for years to come.

method.

daily polish [orchard blossom](#) cleaner

"safe for your CaesarStone, safe for the planet. here's something perfect for your surface cleaning. it's a non-toxic, biodegradable formula that buffs quartz surfaces and leaves you with nothing but a streak-free, sparkling clean."
